

HOSTACCESS® DELIVERS PC-TO-HOST CONNECTIVITY TO LEGACY APPLICATIONS

Rogue Wave® HostAccess® offers a suite of terminal-emulation products that provide Microsoft® Window® users secure access to legacy, host-based applications, as well as the ability to transform the interface of existing applications using a browser or any supported ActiveX® Document containers.

HOSTACCESS® TECHNOLOGY ENABLES:

- Increased host user productivity by providing the ability to perform multiple tasks
- Standardization on one terminal emulation solution
- Point-and-click report production and host data integration with Windows applications
- Connection to multiple systems within one integrated environment
- Reduction in software administration time and costs

Regular Green Screen

Auto GUI Screen

Whether you're looking for asynchronous/synchronous connections, server-based administration, concurrent users or multiple session access, the HostAccess solution offers all of this functionality in a single package.

THE HOSTACCESS® SOLUTION IS SIMPLE

As easy as one, two, three, HostAccess technology enables you to implement your IT strategy in three steps:

1. Create a tailored GUI to transform most traditional green screens into modern, Windows-like applications in minutes using the powerful AutoGUI features
2. Integrate your host applications with your PC applications using OLE and DDE automation
3. Transform your host applications with floating toolbars, hotspots, hot keys, mouse support, icons, push buttons, secondary windows, graphs, ActiveX Controls, and COM Objects using the AiF Toolkit.

FEATURES

FEATURE	DETAIL
Integrate other Applications	Bring other departmental and company applications together in one common interface using your choice of interfaces
Powerful AutoGUI	Completely transform the look and feel of green-screen legacy applications, dramatically simplifying the processes of reading, understanding, and entering information
Mouse Navigation	Use your mouse to navigate through applications and menus and jump to inputs
Customize your Keyboard	The keyboard mapping option allows you to define functions for PC keys; you can map keys to macros, scripts or specific character strings
Multiple Sessions	Run any number of host sessions concurrently; this is limited only by available PC memory or by any other restrictions imposed by network communication protocol
File Transfer*	Supports all the standard file transfer protocols, including Kermit, X Modem, Y Modem, Z Modem, IND\$FILE, and FTP, as well as its own proprietary file transfer protocols (PICK.DOS, and UNIXDOS)
Command Stacker	Recall and edit previously entered keyboard entries without retyping; configure the command stacker to prevent username and passwords from being recorded
True Proportional Fonts	All non-fixed pitch fonts are supported, enabling users to replace traditional green-screen fonts with new ones
3D Line Sculpting	Enhances on-screen line drawing by using a 3D sculpted line-effect giving your application a 'chiselled' look and feel
Macro Scripting Support	HostAccess' powerful macro facility allows you to automate standard tasks. You can either use the macro recorder to automate simple tasks, or you can write a program in HostAccess' macro language to automate almost any host task
x64 Support	HostAccess supports Microsoft x64 Editions of Windows XP Professional and Windows Server 2003
Printing	HostAccess offers you the ability to configure your printer in order to support the requirements of your particular environment. Send printer output to a file, assign local (slave) host printing, or define graphics support for printing
AiF	HostAccess' AiF™ feature allows your programming team to implement a host-driven GUI client for your applications. This implementation enables your application to support Dumb Terminals, Character based emulation, and Full Windows GUI support

* HostAccess now also supports Passive FTP.

SUPPORTED NETWORKS & EMULATIONS

NETWORKS	EMULATIONS
<ul style="list-style-type: none"> • NetSoft APPC Router • Loopback • Modem • Secure Shell (SSH) • Secure Sockets (SSL) • Serial port • Testfile • U2* Sockets • U2* Sockets over SSL • Windows Sockets 	<ul style="list-style-type: none"> • ADDS View Point • ADM11 (H, P, R & W models) • Ampex 230 • ANSI (+ Color) • Bull VIP 7800 • DEC VT52, VT100, VT220 (8-bit), VT320 & VT420 • Data General DG216 • Galileo • IBM 3270, 3287 Printer, 5250 (inc TN5250E) & PC Monitor • ICL 7561 & DRS-M10/M15 • IN2 SM9400 (J & G models) • MDIS Prism 8, Prism 9 & Prism 9 ANSI • Microfusion MF-30 • PRIME PT200 • QUME QVT119 • SCO ANSI Console • Televideo TVI920 & TVI955 • UCL Cifer T205 • Videotex • Wyse WY50, WY-50+ & WY-60
